

RateIt — Master Handover Pack

Upload-ready bundle for developer, AI coding crew, or technical reviewer

Purpose: This pack consolidates the core documents needed to hand RateIt over cleanly. It is designed so a developer, technical co-founder, or AI-assisted coding team can understand the product, scope the MVP, quote the work, and start Sprint 1 without needing the full chat history.

Recommended reading order

- 1. RateIt_Developer_Handoff.pdf — start here for the product concept, architecture, and delivery framing.
- 2. RateIt_Technical_Build_Spec.pdf — read next for the MVP boundary, screens, data model, API scope, and acceptance criteria.
- 3. RateIt_Wireframe_Screen_Spec.pdf — use this for screen-by-screen understanding and quoting discipline.
- 4. RateIt_GitHub_Issues_Sprint1.pdf — use this to create the first GitHub issue set.
- 5. RateIt_GitHub_Project_Board_Sprint1.pdf — use this to create the Sprint 1 board and dependency flow.
- 6. RateIt_Merchant_Assessment_Workbook.xlsx — use this as the structured trust-assessment model and seed logic reference.

What is in the pack

File	Type	Purpose
RateIt_Developer_Handoff.pdf / .docx	Concept + handoff	Explains what RateIt is, the MVP architecture, and what needs to be built first.
RateIt_Technical_Build_Spec.pdf / .docx	Build spec	Defines screens, flows, data model, APIs, verdict logic, and quote-control scope.
RateIt_Wireframe_Screen_Spec.pdf / .docx	Wireframe spec	Screen-by-screen reference with low-fi wireframes and acceptance notes.
RateIt_GitHub_Issues_Sprint1.pdf / .docx	Execution set	Sprint 1 issues ready to paste into GitHub.
RateIt_GitHub_Project_Board_Sprint1.pdf	Board guide	Sprint 1 project board layout, sequencing, dependencies, and labels.
RateIt_Merchant_Assessment_Workbook.xlsx	Assessment model	Structured merchant review workbook for verdicts, reasons, and internal discipline.

What this pack is meant to achieve

- Give the builder a clear understanding of the first shippable RateIt product.
- Prevent scope bloat by pinning the MVP to a walking skeleton.
- Make it easier to get meaningful quotes from developers or AI coding agents.
- Create one source of truth for Sprint 1 so work can be broken into parallel tasks.

What is intentionally out of scope for the first handover

- No AI-driven scam detection in version one.
- No heavy web scraping or automated social listening in version one.
- No merchant billing portal, advanced analytics, or public directory in version one.
- No attempt to solve every trust or e-commerce problem before the browser extension MVP works.

Suggested first instruction to a builder

Use these documents to estimate and build a walking-skeleton MVP where: an admin can create or edit a merchant record; the backend stores and serves a verdict by domain; and the browser extension displays that verdict with reasons on a known test domain.

Bundle contents

- RateIt_Developer_Handoff.docx
- RateIt_Developer_Handoff.pdf
- RateIt_Technical_Build_Spec.docx
- RateIt_Technical_Build_Spec.pdf
- RateIt_Wireframe_Screen_Spec.docx
- RateIt_Wireframe_Screen_Spec.pdf
- RateIt_GitHub_Issues_Sprint1.docx
- RateIt_GitHub_Issues_Sprint1.pdf
- RateIt_GitHub_Project_Board_Sprint1.pdf
- RateIt_Merchant_Assessment_Workbook.xlsx
- RateIt_Handover_Pack_Index.docx
- RateIt_Handover_Pack_Index.pdf
